

Letter of Recommendation for Mr. Sepehr Rahmani

Mr. Sepehr Rahmani was a student in my lab at Heinrich Heine University Düsseldorf. He performed very successfully his internship.

Sepehr worked on an ongoing topic of KRAS interaction with synthetic liposomes, by expressing various KRAS variants in bacteria and insect cells and purifying them for the analysis of their liposome-binding capabilities. As a motivated and ambitious student, he learned and enhanced the task with a variety of standard methods of biochemistry and molecular biology in my lab in short time. Despite his almost finished education as a biochemist, he always showed interest for new and complex working methods and concepts. His working and communication skills are and were fully satisfactory and compatible with the goals of my research group.

With his excellent and far above average achievements, Sepehr is one of the most high-performing students I have met. He always turns out to be a very diligent, purposeful and ambitious student. Overall, I will strongly recommend him as he is independent, resourceful, handles responsibility well and has confident attitude.
